**RATE SHEET FORMAT**

- A. Sheet Numbering** - Sheet numbers appear in the upper right corner of the page. Sheets are numbered sequentially. However, new sheets are occasionally added to the rate sheet. When a new sheet is added between sheets already in effect, a decimal is added. For example, a new sheet added between sheets 14 and 15 would be 14.1.
- B. Sheet Revision Numbers** - Revision numbers also appear in the upper right corner of each page. These numbers are used to determine the most current sheet version of this file. For example, the 4th revised Sheet 14 cancels the 3rd revised Sheet 14. Because of various suspension periods, deferrals, etc. the ICC follows in their rate sheet approval process, the most current sheet number on file with the Commission is not always the rate sheet pages in effect.
- C. Paragraph Numbering Sequence** - There are seven levels of paragraph coding. Each level of coding is subservient to its next higher level:
- 2
  - 2.1
  - 2.1.1
  - 2.1.1(A)
  - 2.1.1(A)(1)
  - 2.1.1(A)(1)(a)
  - 2.1.1(A)(1)(a)(1)
- D. Check Sheets** - When a Rate Sheet revision is made an updated check sheet accompanies the rate sheet filing. The check sheet lists the sheets contained in the rate sheet, with a cross reference to the current revision number. When new pages are added, the check sheet is changed to reflect the revision. All revisions made in a given filing are designated by an asterisk (\*). There will be no other symbols used on the check sheet if these are the only changes made to it (i.e., the format, etc. remains the same, just revised revision levels on some pages). The rate sheet user should refer to the latest check sheet to find out if a particular sheet is the most current on file with the ICC.
