**SECTION 3 - DESCRIPTION OF SERVICE AND RATES, (CONT'D.)**

**3.5 Calculation of Distance**

Usage charges for all mileage sensitive products are based on the airline distance between serving wire centers associated with the originating and terminating points of the call.

The serving wire centers of a call are determined by the area codes and exchanges of the origination and destination points.

The distance between the Wire Center of the Customer's equipment and that of the destination point is calculated by using the "V" and "H" coordinates found in BellCore's V&H Tape and NECA FCC Pricing guide No. 4.

- Step 1:** Obtain the "V" and "H" coordinates for the Wire Centers serving the Customer and the destination point.
- Step 2:** Obtain the difference between the "V" coordinates of each of the Wire Centers. Obtain the Difference between the "H" coordinates.
- Step 3:** Square the differences obtained in Step 2.
- Step 4:** Add the squares of the "V" difference and "H" difference obtained in Step 3.
- Step 5:** Divide the sum of the square obtained in Step 4 by ten ( 10). Round to the next higher whole number if any fraction results from the division.
- Step 6:** Obtain the square root of the whole number obtained in Step 5. Round to the next higher whole number if any fraction is obtained. This is the distance between the Wire Centers.

**Formnla=**

$$\sqrt{\frac{|V_i - V_j|^2 + |H_1 - H_2|^2}{10}}$$
